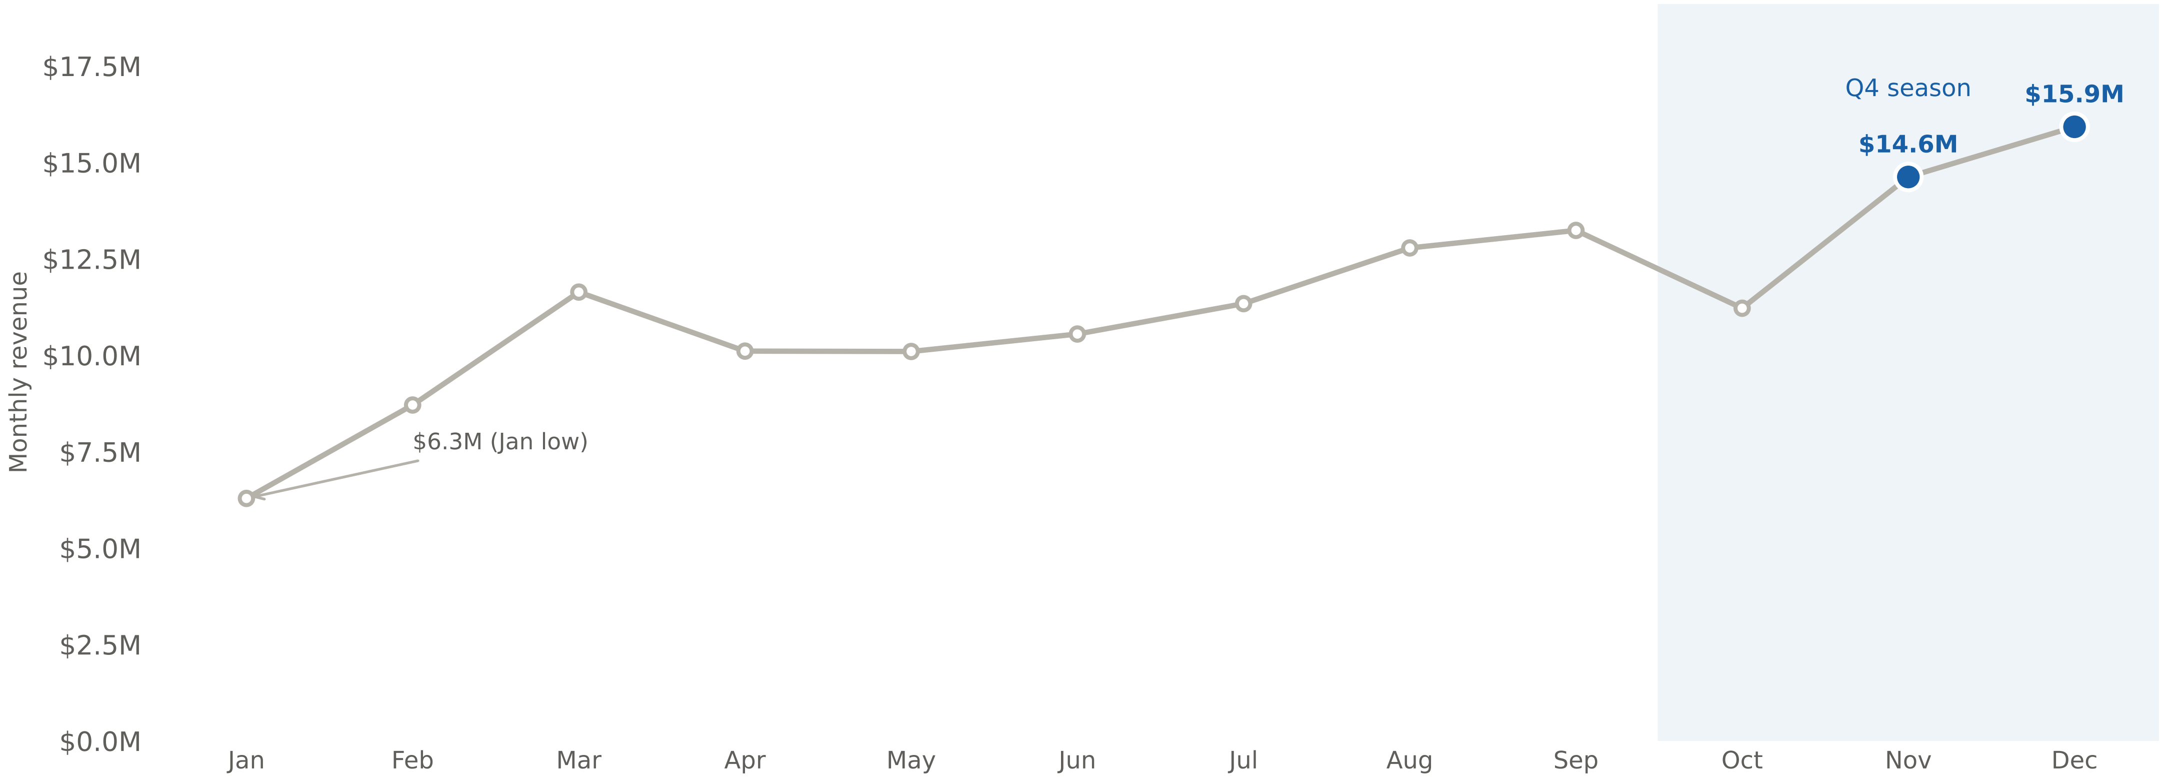
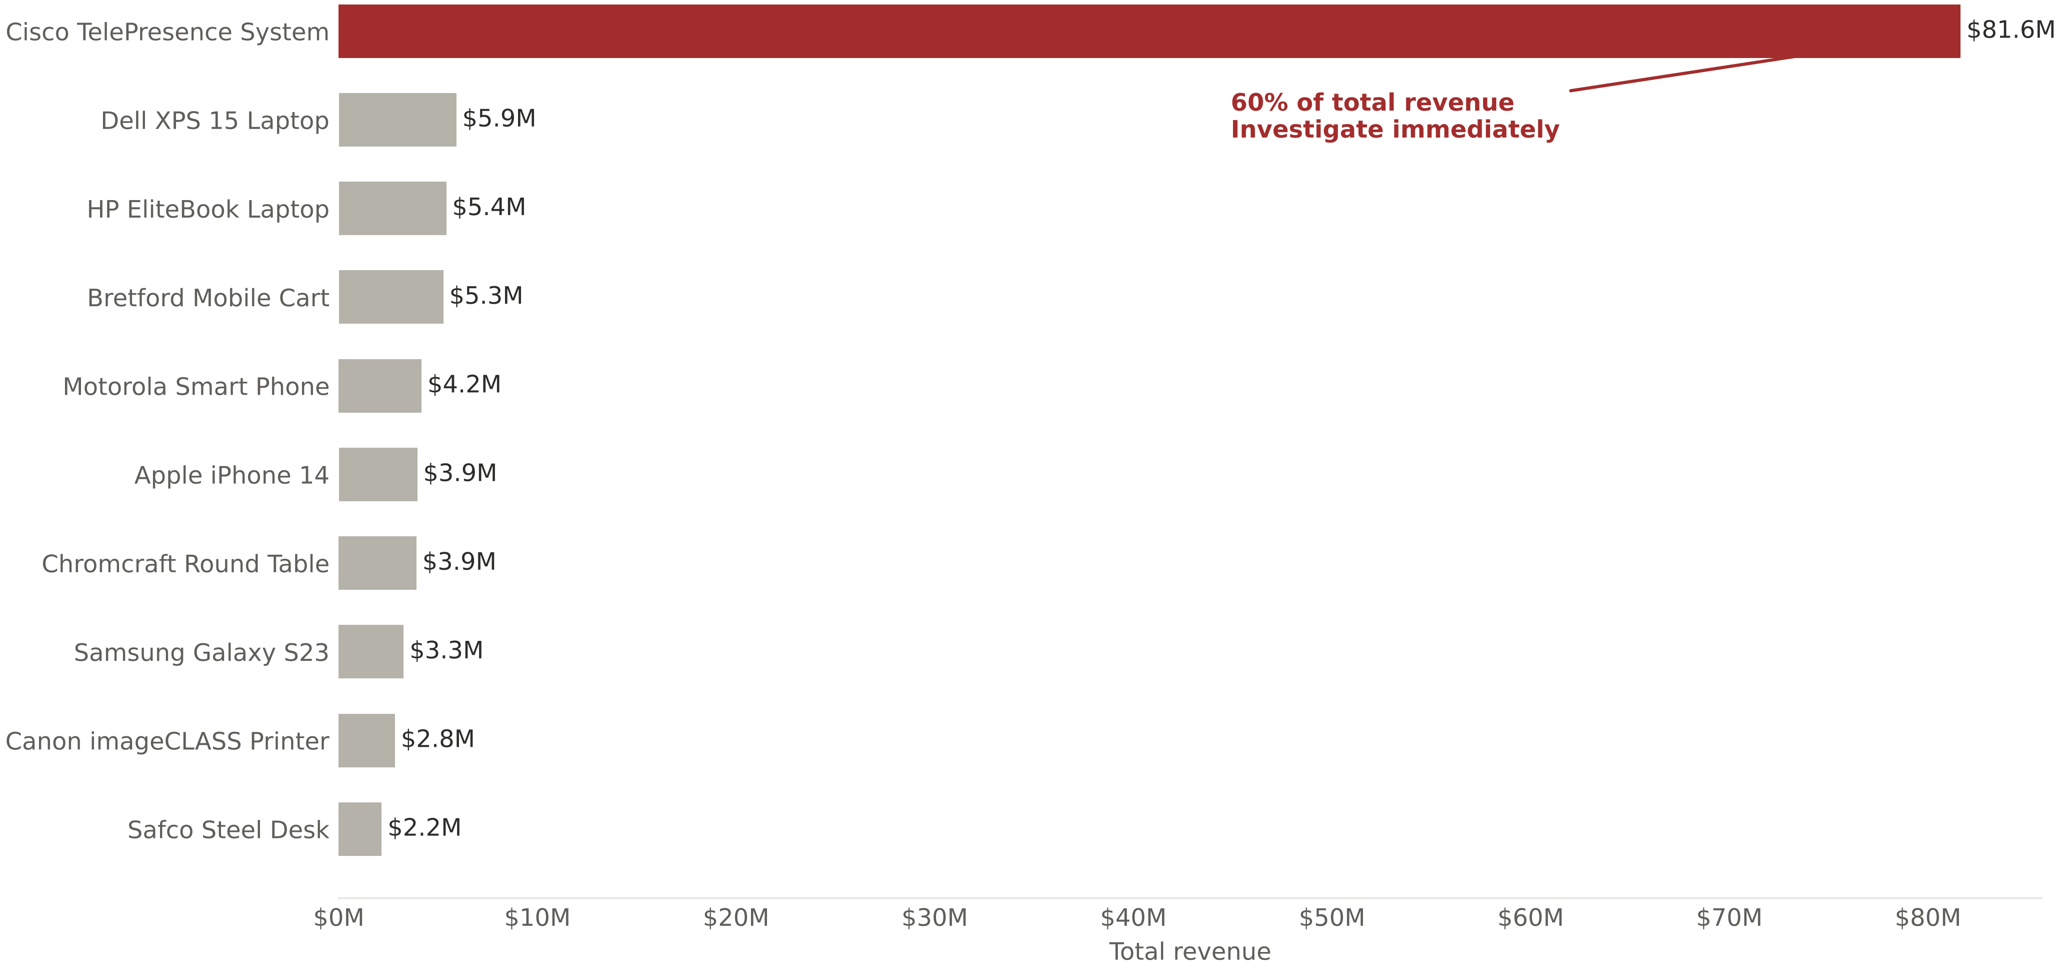
December sales peak 153% above January — plan Q4 inventory by August



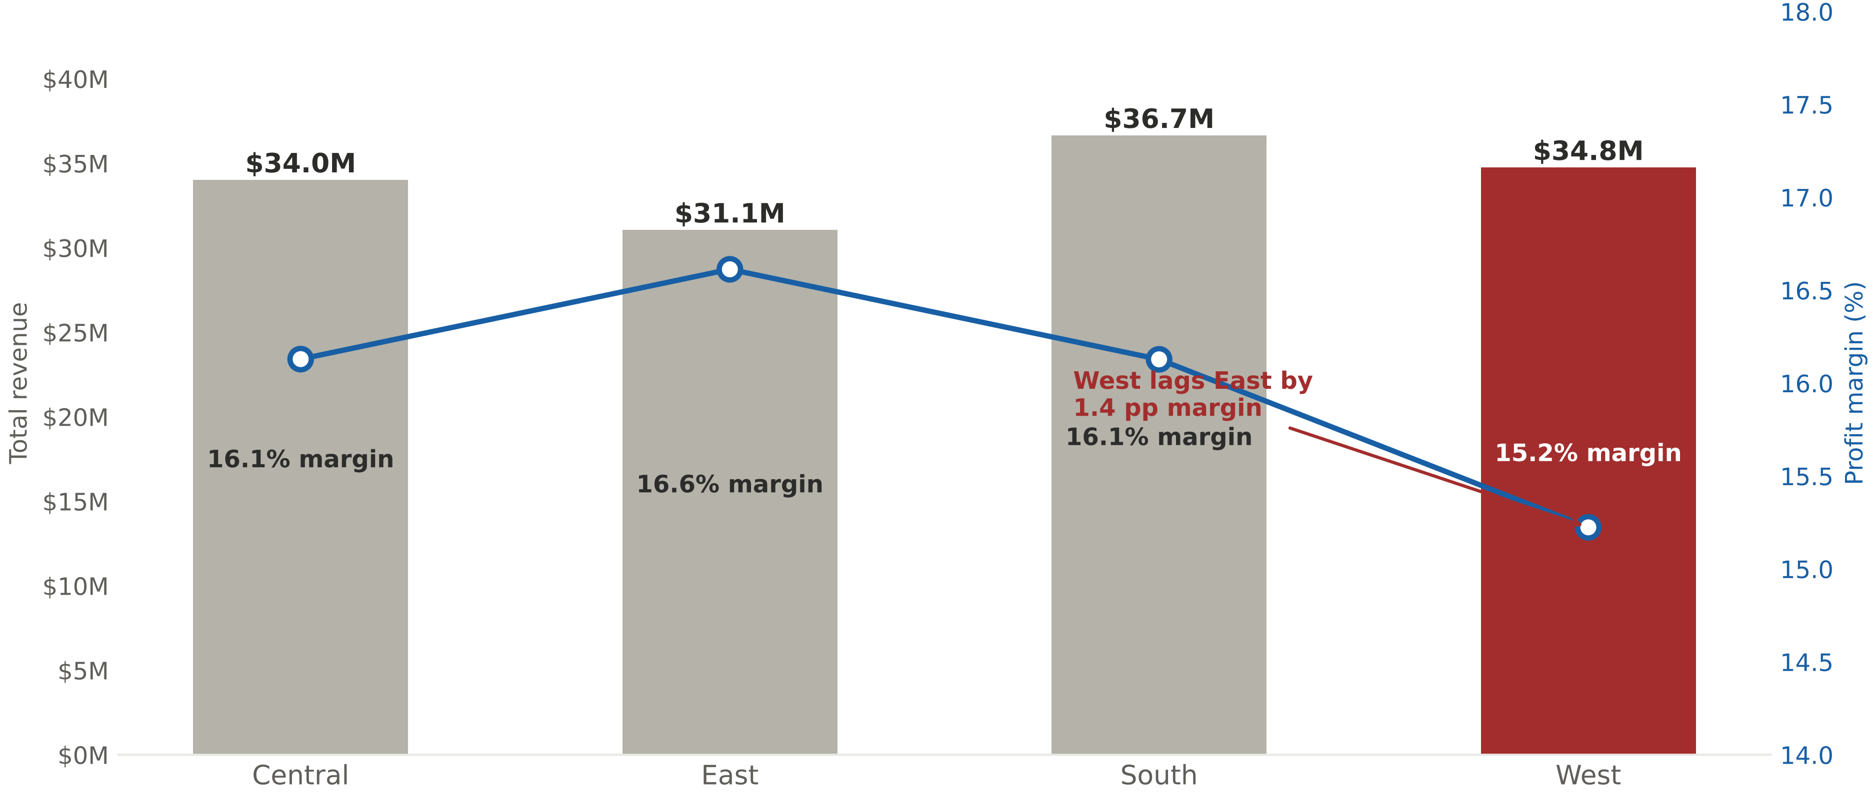
Q4 spike is statistically significant ($t = 6.24$, $p < 0.0001$). It repeats every year without exception.

One product drives 60% of all revenue — a critical concentration risk



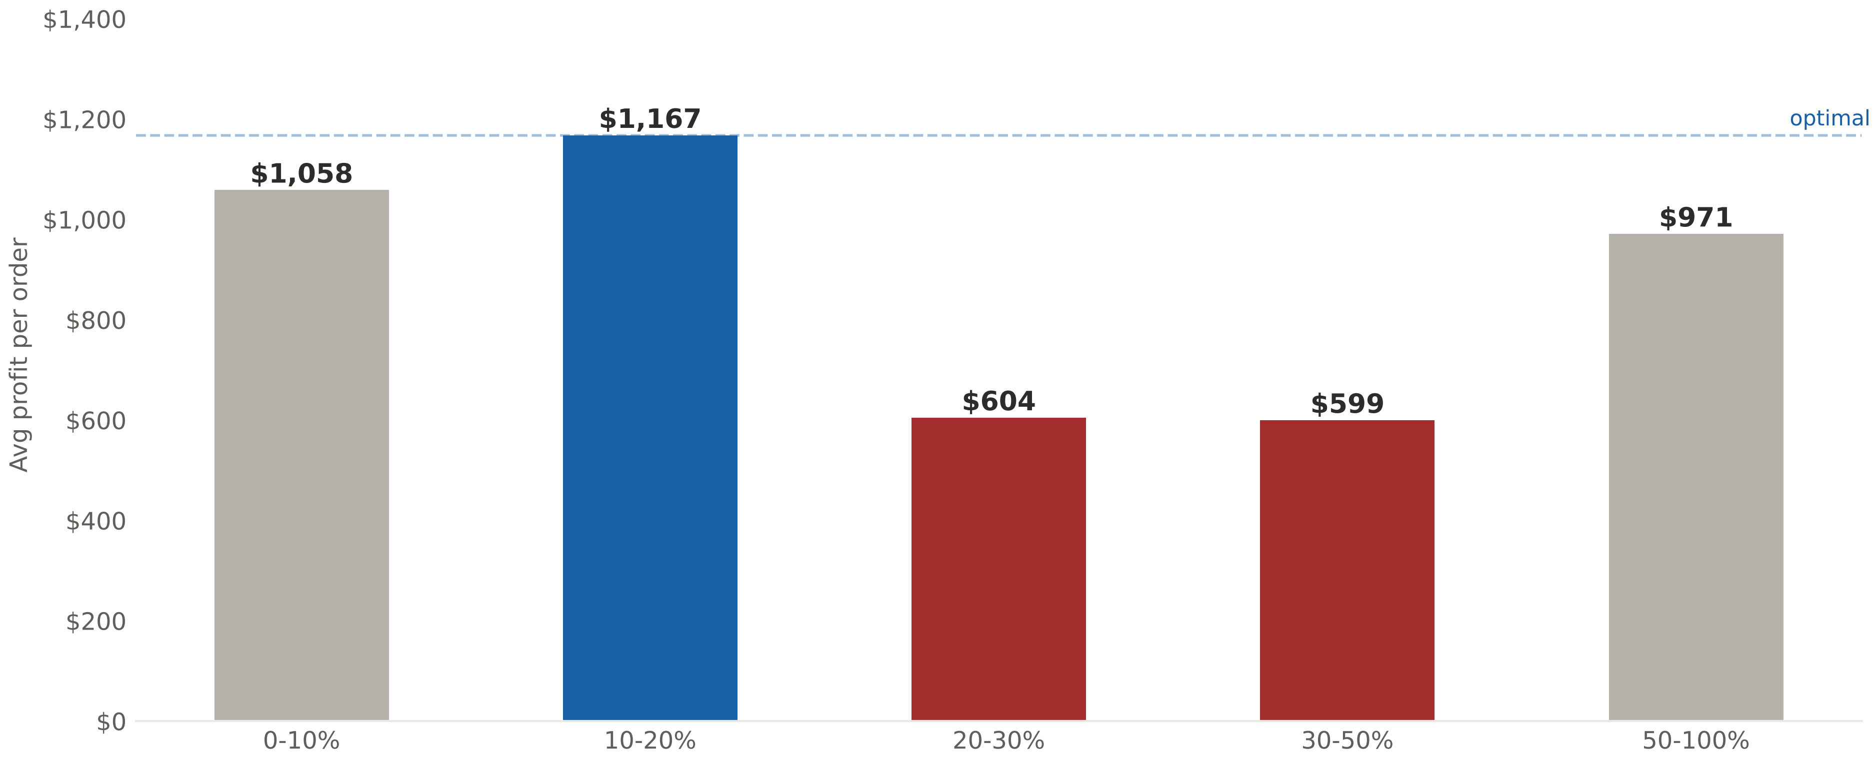
If Cisco TelePresence demand drops 20%, the business loses more revenue than the next 9 products combined could replace.

Revenue is balanced across regions — but West has the lowest profit margin



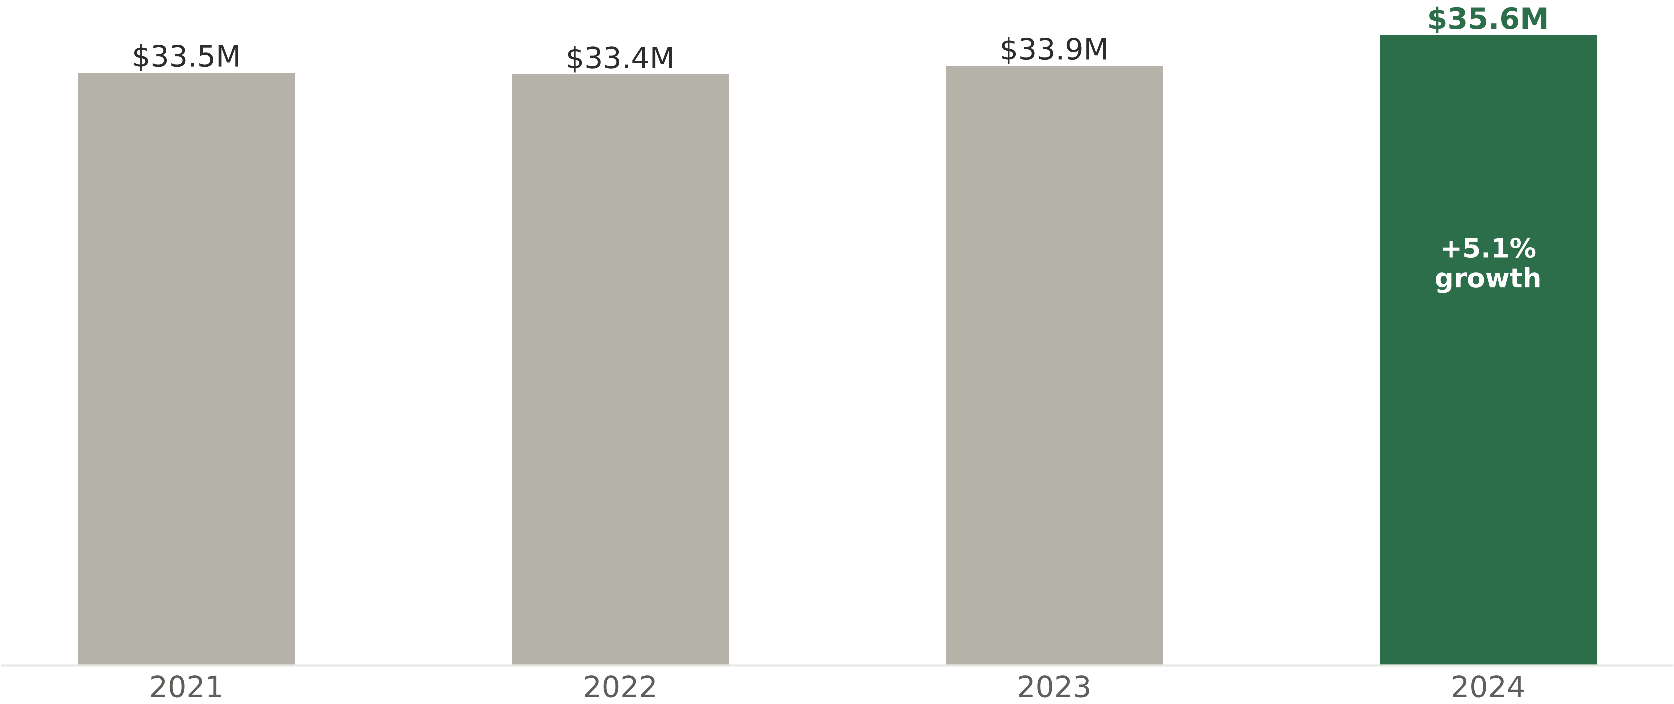
West margin (15.2%) lags East (16.6%) by 1.4 pp — roughly $480K in annual profit unrealised.

Discounts above 20% cut average profit per order nearly in half



The 10-20% band yields the highest profit per order. Above 20%, profit drops from 1,167toaround600.

After three flat years, 2024 posts the strongest growth — replicate what worked



2024 revenue grew +5.1% vs 2023, the strongest year-on-year gain in the dataset. Momentum is building.

SALES ANALYSIS 2021-2024 | EXECUTIVE SUMMARY

AUDIENCE

VP of Product and Sales leadership

GOAL

Identify product risks, pricing inefficiencies,

and seasonal patterns to drive decisions.

KEY FINDINGS

1. 60% of revenue from ONE product (Cisco TelePresence)

Extreme concentration risk — investigate immediately.

2. West margin (15.2%) lags East (16.6%)

Roughly $480K annual profit unrealised.

3. December sales are 153% above January

Predictable — plan inventory by August.

4. Discounts above 20% cut profit nearly in half

Cap at 20%. Pilot for 90 days.

5. 2024 grew +5.1% — strongest year in 4 years

Identify what drove growth and replicate it.

IMMEDIATE ACTIONS

Audit Cisco TelePresence raw orders

Set 20% discount ceiling, require approval above

Compare West vs East discount and cost structure

Lock Q4 inventory plan by August

Build monthly KPI dashboard in Tableau or Power BI
